Summary of Changes

This publication contains the following new or updated information. This list includes substantive updates only and is not intended to reflect all changes.

Topic	Page
Combined and updated RA/RAB under category C of the Catalog Number Explanation	5
Updated Material Terminations in the Common Specifications table to reflect current range changes	6
Added Storage Temperature and Humidity to Common Specification tables	6, 14, 18, 26
Updated Termination section to reflect current range changes, includes: renaming of groups, updates to dimensions, updates to catalog number groups, and verbiage updates in the introduction.	7
Changed range of catalog numbers for cabinet 3 - floor mounted	9
Corrected IPO0/Open Sizing Guidelines tables to be consistent with all other tables	10

Product Overview

Allen-Bradley reactors help keep equipment running longer by absorbing many of the power line disturbances that can shut down your drive. Allen-Bradley isolation transformers can provide both voltage change and isolation for your variable speed drive. These designs are harmonic compensated and IGBT protected to help assure optimum performance in the presence of harmonics.

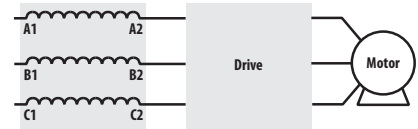

1321-3R, 1321-3RA, and 1321-3RB Series Line Reactors

Applying Allen-Bradley Line Reactors

At the Input of the Drive

At the input of a drive, a line reactor helps protect against surges or spikes on the incoming power lines and help reduce harmonic distortion.

- Eliminate spurious tripping
- Improve true power factor
- Extend semiconductor life
- Reduce voltage notching
- Reduce harmonic distortion
- Meet IEEE-519 or EN-61800

At the Output of the Drive

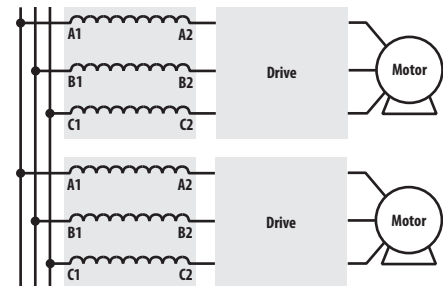

In long motor lead applications, Allen-Bradley load reactors that are located between the drive and motor help reduce dv/dt and motor terminal peak voltages. The use of a load reactor also helps protect the drive from surge currents that are caused by rapid changes in the load.

- Protect motors from long lead effects
- Reduce surge currents
- Reduce output voltage dv/dt
- Reduce motor temperature
- Extend semiconductor life
- Reduce audible motor noise

With Multiple Drives

Multiple drives on a common power line should each have their own line reactor. Individual line reactors provide filtering between each drive to help reduce any crosstalk while providing optimum surge protection for each drive.

With Multiple Motors

When multiple motors are controlled by one drive, a line reactor can typically be used between the drive and all of the motors. Size the line reactor based on the total motor/load horsepower.

With Single-Phase Input

A three-phase reactor can be used for single-phase applications by routing each of the two input power conductors to the outside two coils, and leaving the center coil disconnected. The sum of the inductance of the two coils is the total inductance that is applied to the circuit. Contact Rockwell Automation Technical Support for assistance in specifying the proper reactor.

Selecting the Correct Impedance Rating

Why is the Right Impedance Rating Important?

Selecting the correct impedance rating is critical for your job. An impedance value that is too low may not limit peak current. An impedance value that is too high may reduce input voltage. Allen-Bradley line reactors offer two impedance ratings.

3% Impedance Rated Reactors to Reduce Spurious Trips

Allen-Bradley line reactors that are rated at 3% are typically sufficient to absorb line spikes and motor current surges and will help prevent spurious tripping of drive and circuit breakers in most applications.

5% Impedance Rated Reactors to Reduce Harmonic Content

Allen-Bradley reactors that are rated at 5% are best for reducing harmonic current and frequencies. These line reactors help comply with IEEE-519 (not normally used as load reactors).

Voltage Spike Protection

Voltage spikes on AC power lines can cause elevation of the DC bus voltage, which may cause the drive to trip on an overvoltage condition.

3% impedance reactors are effective at helping to protect drives against voltage spikes and spurious tripping. Allen-Bradley line reactors absorb these line spikes which help protect the drive from spurious tripping and damage.

Motor Protection

Allen-Bradley load reactors can help protect motors from high peak voltages.

For IGBT drive applications with long drive-to-motor lead lengths, Allen-Bradley load reactors can help protect against fast dv/dt rise times.

Common Specifications

Specification		Rating
Material	Enclosures	IP11 (NEMA/UL Type 1) – Sheet steel in accordance with UL, NEMA requirements
		IP66 (Open) or IP20 (Open – with finger-safe terminals)
	Terminations ⁽¹⁾	1...45 amp (fundamental) Ratings – Finger guard IP20 terminal block
		55...160 amp (fundamental) Ratings – Solid copper box lugs
160...400 amp (fundamental) Ratings – Copper tab terminals ⁽²⁾		
		401 amps and above – Copper tab terminals ⁽²⁾
Harmonic Compensation	All line reactors are compensated for the additional currents and high frequencies that are caused by the presence of harmonics	
General Protection	Impedance	1.5%, 3%, or 5% based on the fundamental current ratings
	Overload Rating	200% of fundamental current for 30 minutes 300% of fundamental current for 1 minute
	dv/dt Protection	Meets NEMA MG-1, part 31
Electrical	Maximum Rated Voltage	600V AC (units with terminal blocks) 690V AC (units with box lugs or tab terminals)
	Maximum Switching Freq.	20 kHz
	Fundamental Frequency	Line/Load - 50/60 Hz
	Temperature Rise	135 °C average
	Dielectric Strength	3000 Volts rms (4243 volts peaks)
	Inductance Curve (Typical)	100% at 100% current 100% at 150% current 50% at 350% current (minimum)
	Inductance Tolerance	±10%
	Insulation System	Class N (200 °C)
	Impregnation	High bond strength solventless epoxy, 200 °C, UL94HB recognized
Environmental	Ambient Temperature	50 °C Open Style Reactor (maximum) 40 °C Enclosed Style Reactor (maximum)
	Altitude	1000 meters (3280 feet)
	Storage Temperature (all const.)	-40...+70°C (-40...+158°F)
	Humidity	5...95% noncondensing
Agency Approvals	cULus UL 508 CSA C22.2 Class N200C	File E196302 Component Listed (1...2400 amps) File E196302 UL Listed NEMA Type 1 units (1...2400 amps) Note: Short Circuit rating not required under Exception No.1 of UL508A SB4.2.1 effective 4/25/06
	CE	Certified to EN61558-2-20:2011 and EN50581:2012
	Morocco	Compliance to NM EN 61800-5-1
	UKCA	Compliance to EN 61800-3, EN 61800-5-1, EN IEC 63000

(1) For 160 amp rating, see the [Termination](#) section of this document for additional information.

(2) For applications with reactors rated 160 amps or more with copper tab terminals, cable-style connections are recommended.

Termination

Reactors are supplied with either an integral-mounted terminal block, box lugs, or copper tabs which are front facing or side facing. See the tables that follow and the [Catalog Number Explanation](#) for specific information. The ‘3R’ and ‘3RA’ designations for the 1321 line reactors indicate the following: 3R = Open Enclosure Line Reactor and 3RA = NEMA 1 Enclosure Line Reactor. The dimensions and weights that are provided on the pages that follow are for estimating purposes only. Tab orientation may vary.

Typical Termination Types and Specifications

Reactor Catalog Number		Termination	Max/Min Wire Size	Max Torque
IP00 (Open) or IP20	IP11 (NEMA/UL Type 1)	Type	mm ² (AWG)	N·m (lb·in)
1321-3R1-A to 1321-3R8-D	1321-3RA1-A to 1321-3RA8-D	20 A Terminal Block	5.26 / 0.3 (10/22)	0.51 (4.5)
1321-3R12-A to 1321-3R35-B	1321-3RA12-A to 1321-3RA35-B	65 A Terminal Block	16.0/0.3 (5/22)	1.81 (16)
1321-3R35-C to 1321-3R45-C	1321-3RA35-C to 1321-3RA45-C	85 A Terminal Block	21.2/0.8 (4/18)	2.26 (20)
1321-3R55-A to 1321-3R100-C	1321-3RA55-A to 1321-3RA100-C	SLU-125 Box Lug	50.0/10.0 (0/6)	5.09 (45)
1321-3R130-A to 1321-3R160-A	1321-3RA130-A to 1321-3RA160-A	SLU-225 Box Lug	120.0/27.0 (0000/2)	16.95 (150)

Reactor Catalog Number		Termination	Contact Surface (H x W)	Hole Diameter
IP00 (Open) or IP20 (R, RB)	IP11 (NEMA/UL Type 1) (RA, RAB)	Type	mm (in.)	mm (in.)

1321-3RB250-A to 1321-3RB250-C	1321-3RAB250-A to 1321-3RAB250-C		47.63 x 38.10 (1.88 x 1.5)	10.31 (0.406)
1321-3RB320-A to 1321-3R500-A	1321-3RAB320-A to 1321-3RA500-A		47.63 x 38.10 (1.88 x 1.5)	10.31 (0.406)
1321-3R500-B to 1321-3R500-C	1321-3RA500-B to 1321-3RA500-C	Side Facing Copper Tab	76.2 x 38.1 (3.00 x 1.5)	13.49 and 6.35 (0.531 and 0.25)
1321-3R600-A to 1321-3R600-C	1321-3RA600-A to 1321-3RA-600-C		76.2 x 38.1 (3.00 x 1.5)	13.49 and 6.35 (0.531 and 0.25)
1321-3R750-A to 1321-3R750-C	1321-3RA750-A to 1321-3RA750-C		76.2 x 38.1 (3.00 x 1.5)	13.49 and 6.35 (0.531 and 0.25)
1321-3R850-A to 1321-3R1000-C	1321-3RA850-A to 1321-3RA1000-C	Front Facing Copper Tab	95.25 x 95.25 (3.75 x 3.75)	x4 13.46 (0.53)

Mounting Dimensions and Weights

IMPORTANT The dimensions and weights that are provided on the following pages are for estimating purposes only. Conduit entry locations for floor-mounted enclosures are the responsibility of the installer. Contact your Rockwell Automation sales office if certified drawings are required for planning and installation.

IP11 (NEMA/UL Type 1)

Cabinet 1 – Wall Mounted

Catalog Number 1321- ...	Unit	Dimensions in mm (in.) and Weights in kg (lb)

		H	W	D	Feet M1	Feet M2	Weight ⁽¹⁾ (Cabinet Only)
3RA500-B to 3RA850-B	Cabinet 4	1194 (47.0)	674 (26.6)	633 (24.9)	592 (23.3)	552 (21.8)	62.14 (137)
3RA850-C to 3RA1000-C	Cabinet 5	1829 (72.0)	674 (26.6)	633 (24.9)	592 (23.3)	552 (21.8)	75.3 (166)

(1) For total weight - add enclosure weight to specific reactor weight.

IP00/Open

Use the reactor outline shown to reference dimensions in the Sizing Guidelines. Dimensions A, B, and C show the overall width, height, and depth, respectively. Dimensions D, E, and F show the mounting dimensions.

This diagram is for reference only - your actual product may differ in terminal location and type, as well as the number and type of mounting options.

Sizing Guidelines

Fundamental amps are used for sizing the reactor to be equal to or slightly higher than the total motor FLA. Sizing reactors to drive ampere ratings alone may result in mis-sizing the reactor.

Catalog Number	Fundamental Amps	Inductance - mH (Based on Fundamental Amps)	Watts Loss	Dimensions in mm (in.) and Weight in kg (lb)

(1) Removable lifting rings are supplied with the unit.

1321 Reflective Wave Reduction (RWR) Devices

Description of Reflected Wave Phenomenon

The inverter section of a drive does not produce sinusoidal voltage, but rather a series of voltage pulses created from the DC bus. These pulses travel down the motor cables to the motor and then reflected back to the drive. The reflection is dependent on the rise time of the drive output voltage, cable characteristics, cable length, and motor impedance. If the voltage reflection is combined with another subsequent pulse, peak voltages can be at a destructive level. An IGBT drive output may have reflected wave transient voltage stresses of up to twice (2 pu or per unit) the DC bus voltage between its own output wires. Multiple drive output wires in a single conduit or wire tray further increase output wire voltage stress between multi-drive output wires that are touching. Drive #1 may have a (+) 2 pu stress while drive #2 may simultaneously have a (-) 2 pu stress.

For more details, see the Wiring and Grounding Guidelines for PWM Drives, publication [DRIVES-IN001](#).

Applying RWR Devices

At the Output of the Drive

In long motor lead applications, an Allen-Bradley 1321 RWR located between the drive and motor helps to reduce dv/dt and motor terminal peak voltages. The use of an RWR device also helps protect the drive from surge currents that are caused by rapid changes in the load.

- Protect motors from long lead effects
- Reduce output voltage dv/dt
- Extend semiconductor life
- Reduce surge currents
- Reduce motor temperature
- Reduce audible motor noise

Motor Protection

Allen-Bradley Reflective Wave Reduction devices can help protect motors from high peak voltages.

For IGBT drive applications with long drive-to-motor lead lengths, Allen-Bradley RWR devices can help protect against fast dv/dt rise times.

Catalog Number Explanation

IMPORTANT 1321-RWR products replace existing 1204-RWR products. However, 1204-RWRC modules (RWR and Common Mode Choke assembly) are still available.

Specifications

Specification	Rating	
Material	Enclosures	IP00 (Open)
	Terminations	1...45 amp (fundamental) Ratings – Finger guard IP20 terminal block
		80...160 amp (fundamental) Ratings – Solid copper box lugs
		200...400 amp (fundamental) Ratings – Copper tab terminals ⁽¹⁾
	401 amps and above – Copper tab terminals ⁽¹⁾	
Harmonic Compensation	All line reactors are compensated for the additional currents and high frequencies that are caused by the presence of harmonics	
General Protection	Impedance	3%
	Overload Rating	300% of fundamental current for (1) minute
IGBT Protection	First turn triple insulated offering protection up to 16 kV	16,000 Volts per microsecond dv/dt protection 20 kHz maximum switching frequency
Electrical	Maximum Rated Voltage	600V AC, 50/60 Hz frequency
	Maximum Switching Freq.	4 kHz
	Temperature Rise	115 °C
	Dielectric Strength	4000 Volts rms (5600 volts peaks)
	Inductance Curve	100% at 100% current, 100% at 150% current, 50% at 350% current
	Insulation System	Class H (180 °C or better)
	Impregnation	High bond strength epoxy impregnation, 4000V high dielectric strength
Environmental	Ambient Temperature	45 °C
	U.L. Listed	UL-508 - IP00, IP20, and IP11
	International	Conforms to VDE 0550
	CE	Not certified
	Storage Temperature (all const.)	-40...+70°C (-40...+158°F)
	Humidity	5...95% noncondensing

(1) For applications with Reflective Wave Reduction devices rated 200 amps or more, cable-style connections are recommended.

Termination

Allen-Bradley 1321 RWR devices rated 45 amps (fundamental) and below are supplied with an integral mounted terminal block. Devices that are rated 55...160 amps (fundamental) are supplied with box lugs. Devices rated 200...400 amps (fundamental) can be supplied with box lugs or copper tabs. Above 400 amps (fundamental), solid copper tabs are used.

Approximate Dimensions, Weights, Wire Size, and Terminal Blocks

The dimensions and weights that are provided on the following page is for estimating purposes only. Contact your Rockwell Automation sales office if certified drawings are required for planning and installation.

Specifications

Specification		Rating
Electrical	General	Delta primary, wye secondary, 60 Hz, aluminum wound, neutral terminal available for customer use
	Standard Voltage Taps	5.0...175 kVA, 1...5.0% FCAN and FCBN
		220...880 kVA, 1...2.5% FCAN and FCBN
	Insulation System	Class 220
		150 °C rise over 40 °C ambient
Peak 40 °C ambient with 30 °C 24-hour average		
Efficiency	98% (2% losses)	
Environmental	Elevation	Up to 1000 meters. Above 1000 meters, consult factory for derating
	U.L. Listed	File E112313
	Storage Temperature (all const.)	-40...+70°C (-40...+158°F)
	Humidity	5...95% noncondensing
Construction	Enclosure	NEMA/UL Type 3R (IP32)
		Heavy duty ventilated enclosure with metal screens that help protect all vents and finished in ANSI 61 grey
	Termination	Transformers up to 75 kVA have integral high and low voltage lugs that are installed, suitable for copper or aluminum cable installation
	Conduit Entry	Standard knockouts on all enclosures
	Mounting	5...51 kVA units suitable for either floor or wall mounting. 63...75 kVA units suitable for floor, wall, or ceiling mounting with mounting kit 1321-3TWM2 (Style NH3). Larger units are floor mount only
General	Impedance	4...6% impedance (nominal)
	Short Circuit Capability	Meets UL short circuit withstand capability
	Overload Rating	Windings that are designed to withstand overcurrent of 150% of rated load for 60 Seconds or 200% of rated load for 30 Seconds
	Duty Cycle	(1) start every (2) hours
	Thermostats	Thermostats with 1 N.C. contact in each coil, which are wired in series and integral on all units
	K-factor	4

Approximate Mounting Dimensions

IP32, NEMA/UL Type 3R - Styles NH3 Through NH4

Dimensions in mm (in.)

Style	A	Overall A	B	Overall B	C	D	H	K	MA	MB	WMB	WMA
NH3	660.4 (26.00)	—	533.4 (21.00)	635.0 (25.00)	66.0 (38.00)	609.6 (24.00)	355.6 (14.00)	50.8 x 76.2 (2.00 x 3.00)	546.1 (21.50)	482.6 (19.00)	—	—
NH4	812.8 (32.00)	—	647.7 (25.50)	749.3 (29.50)	68.0 (41.00)	609.6 (24.00)	304.8 (12.00)	50.8 x 76.2 (2.00 x 3.00)	596.9 (23.50)	596.9 (23.50)	—	—
NH5 ⁽¹⁾	425.5 (16.75)	492.8 (19.40)	381.0 (15.00)	513.1 (20.20)	546.1 (21.50)	304.8 (12.00)	152.4 (6.00)	35.1 x 44.4 (1.38 x 1.75)	457.2 (18.00)	228.6 (9.00)	177.8 (7.00)	184.4 (7.26)
NH6 ⁽¹⁾	546.1 (21.50)	607.1 (23.90)	495.3 (19.50)	730.3 (28.75)	730.3 (28.75)	431.8 (17.00)	215.9 (8.50)	35.1 x 44.4 (1.38 x 1.75)	577.9 (22.75)	228.6 (9.00)	203.2 (8.00)	247.1 (9.73)

(1) Enclosure Styles NH1 and NH2 are replaced by NH5 and NH6 for 1321-3TH005 through 1321-3TH051 transformer ratings.

IP32, NEMA/UL Type 3R - Styles NJ1 Through NJ6

Dimensions in mm (in.)

1321-Mxxx Common Mode Chokes

1321-Mxxx Common Mode Chokes can be installed with the following Allen-Bradley AC drives.

- PowerFlex® 4-Class
- PowerFlex 750-Series
- 1336 PLUS™ II
- PowerFlex 520-Series
- 1305
- 1336 IMPACT™
- PowerFlex 7-Class
- 1336 PLUS™
- 1336 FORCE™

When installed at the drive output the common mode choke helps to guard against interference with other electrical equipment (Programmable Controllers, sensors, analog circuits, and so forth). In addition, reducing the PWM carrier frequency reduces the effects and lowers the risk of common mode noise interference.

Catalog Number Explanation

1321-DC DC Link Chokes

1321-DC DC Link Chokes can be installed with Frame C PowerFlex 40 and all PowerFlex 400 drives. Add DC Link Chokes in series with the internal DC Bus to:

- Reduce AC input line harmonics
- Help meet IEEE-519 limits
- Absorb voltage/current spikes
- Reduce AC ripple on DC bus
- Reduce dv/dt and dI/dT rates
- Solve spurious overvoltage tripping
- Reduce DC bus transient overvoltage

Specifications

Specification	Rating
General	UL-508 component that is recognized (File E196302)
	1000 Volts DC maximum
	For ripple frequency of 300 Hz or 360 Hz
	50 °C temperature rise
	Suitable for 40 °C ambient temperature
	Class B insulation system (130 °C)
	Suitable for ripple current of 10% peak-to-peak
Touch-safe terminals in many ratings	
Storage Temperature (all const.)	-40...+70°C (-40...+158°F)
Humidity	5...95% noncondensing

Special Features

- Solid copper box lug type terminals on most sizes
- Specially constructed and epoxy impregnated for low noise
- Customized ratings also available - contact the factory for custom mounting, inductance, current or ripple requirements

Important User Information

Solid-state equipment has operational characteristics differing from those of electromechanical equipment. Safety Guidelines for the Application, Installation and Maintenance of Solid State Controls (publication [SGI-1.1](#) available from your local Rockwell Automation sales office or online at <http://www.rockwellautomation.com/literature/>) describes some important differences between solid-state equipment and hard-wired electromechanical devices. Because of this difference, and also because of the wide variety of uses for solid-state equipment, all persons responsible for applying this equipment must satisfy themselves that each intended application of this equipment is acceptable.

In no event will Rockwell Automation, Inc. be responsible or liable for indirect or consequential damages resulting from the use or application of this equipment.

The examples and diagrams in this publication are included solely for illustrative purposes. Because of the many variables and requirements associated with any particular installation, Rockwell Automation, Inc. cannot assume responsibility or liability for actual use based on the examples and diagrams.

No patent liability is assumed by Rockwell Automation, Inc. with respect to use of information, circuits, equipment, or software described in this manual.

Reproduction of the contents of this manual, in whole or in part, without written permission of Rockwell Automation, Inc., is prohibited.

Rockwell Automation Support
